SALTY GLOG

HOW TO PLAY

The referee describes a situation and you tell what your character would do in that context. The referee might ask you to roll a 20-faced die and add one of your character's stat to see if it succeeds in its action. If the situation is **easy**, the total must beat 10 to succeed, if it's **normal**, it has to beat 15, and if it's **hard**, 20.

Sometimes, the referee might tell you that the situation gives you **advantage** or **disadvantage**. Rolling with advantage means rolling twice and choosing the best result. Disadvantage is the opposite.

CREATING A CHARACTER

Roll 1D6+2 to determine each of your character's core stats: Strength (**STR**), Dexterity (**DEX**), and Willpower (**WILL**). Your character has as many Hit Points (**HP**) as its STR.

It has an **Inventory** as big as twice its STR score and a **Psyche** as big as twice its WILL score.

Choose a **Class**. Add the class's starting equipment to your character's *Inventory*, and the class' skills and spells its your *Psyche*. Each class level takes a psyche slot. Note its abilities.

Give your character 1 or 2 **Beliefs**, which you add to their *Psyche*. Beliefs are anything worth dying for.

SKILLS & BELIEFS

A **Skill** is an experience stored in your *Psyche*. All rolls that can be related to a skill you have become *easier* (a hard roll becomes normal, a normal roll becomes easy, and an easy roll becomes a success).

A **Belief** can be anything worth dying for, and is stored in the *Psyche*. If your character knowingly takes a deadly risk for its belief during your adventures, it will be rewarded when *Carousing* in town at the end of an adventure.

INVENTORY & PSYCHE

Inventory. Your character has as many slots as twice its STR. Inventory slots can be filled with objects. Small items like potions, daggers, and ammunition can be stacked in packs of 10 of the same type. If a character goes beyond its capacity, it becomes *Prone*.

Psyche. Your character has as many slots as twice its WILL. Psyche slots can be filled with *Skills*, class levels, spells, *Followers* and *Beliefs*. If a character goes beyond its capacity, it becomes *Dazed*. You can only remove things from your *Psyche* when *Carousing*.

COMBAT

Turn Order: You act before the monsters unless they have surprised your character.

Your Turn: Your character can move nearby, speak *and* do one other action, like casting a spell or attacking.

Attacking: The referee tells you if the target is easy, normal or hard to hit. Roll DEX. If you hit, roll your weapon's damage die and the referee subtracts it from the target's HP. Reducing a monster's HP to 0 kills it. A roll of 20 on an attack means double damage.

On the monsters' turn, it might attack you! In this case, you'll have to dodge.

Dodging: The referee will tell you if the monster's attack is easy, normal or hard to dodge. Roll DEX to avoid it. A die roll of 1 on a dodge means taking double damage.

Spell Saves: Same as attacking and dodging but uses WILL instead of DEX.

DYING

When your character reaches **0 HP,** it falls *Prone* and starts *Dying*. If it takes damage while *Dying*, it dies. If it recovers any HP while dying, it stops *Dying*.

On each of your next 3 turns, your character can attempt to **Stabilize** instead of doing anything else: Make a hard STR roll. On a success, your character recovers 1 HP. An ally can spend their turn making a hard WILL roll for the same effect with appropriate tools or skills.

After 3 turns, if your character is still *Dying*, it dies. If it survives, it gains a *Scar*. If it dies, your companions gain a *Trauma*.

SCARS & TRAUMA

Scars and **Mutations** take inventory slots.

Traumas take psyche slots. Note what caused the *Trauma*. As long as your character has it, it has *disadvantage* against that thing. **Curses** also take psyche slots.

None of these can be removed easily.

HEALING

A 6 hours rest heals all HP losses and consumes 1 ration for the team. Resting requires shelter and heat.

EXPLORING

Time is tracked differently when you travel outdoors or in a dungeon.

Dungeons are divided in rooms. Inside a dungeon, any worthwhile action like investigating a room or battling takes 10 minutes. The referee rolls for random encounters every 30 minutes. You can cross 10 safe rooms you have explored per 10 minutes, or 3 if you want to be discreet.

The **world outside** is divided in hexagons (or hexes). Any worthwhile action like crossing or exploring a hex lasts 6h of the day (*Morning, Day, Evening, or Night*). This unit of time is called a *Watch*. The referee rolls for encounters each time you enter a new location, explore a location or rest.

SALTY GLOG

MELEE WEAPONS

Improvised (wine bottle, chair) 1D4 dmg
can be thrown

Light (dagger, javelin) 1D6 dmg
can be thrown, can be in off-hand

Medium (sword, axe) 1D8 dmg
1D10 damage with two hands

Heavy (greatsword, maul) 1D12 dmg
needs two hands

Pole (spear, halberd) 1D8 dmg
needs two hands, dodging attacks from targets you are attacking is easier

Two-Weapon Fighting When you hit above 20 with your main weapon, you also hit with your off-hand weapon.

RANGED WEAPONS

Light (darts) 1 dmg, *can attack twice*

Medium (sling) 1D4 dmg

Heavy (bow) 1D6 dmg, *needs two hands*

Mechanical (crossbow, musket) 1D12 dmg
needs two hands. takes a turn to recharge

ARMOUR

Each **Armour Point** reduces damage by 1.

Chest protection gives you 1 point. Chest and head protection give you 2 points. Full protection gives you 3 points. A shield gives you 1 extra point. You can't swim, sneak or jump if you are fully protected.

Armour only protects against blunt, piercing, and slashing damage.

TREASURES

Each object you find has a certain value assigned by the referee:

- Mundane (Bag of copper coins)
- Useful (Bag of silver coins)
- Valuable (Bag of gold coins)
- Treasure (Bag of gems)

A **Bag of Coins** takes an inventory slot. A chest normally holds four bags.

When in town, you can trade items from one category for another in the same category (at the referee's discretion, just say what you are looking for). Alternatively, 4 mundane objects are worth 1 useful object, 4 useful objects are worth 1 valuable, and 4 valuables are worth 1 treasure.

LEVELING UP

You level up when you spend a *Treasure* while *Carousing*. When you level up ...

- Increase your HP by 2.
- Increase one of your stats by 1.

Also, gain the next level of your class in alphabetical order or take the first level (A) of another class. You can have up to 4 class levels in total. Add it to your *Psyche*.

FOLLOWERS

You gain followers by *Carousing* and they take a psyche slot. Roll 1D6 for each of their stats. Their inventory is equal to their STR. Followers can also level up, in which case they gain +2 to all stats, a normal inventory and a class.

CAROUSING

When you are back to town, it's time to spend your loot!

If you have taken a deadly risk for one of your *Beliefs*, you can either remove one of your *Traumas*, gain a new *Skill* related to your risky action or obtain a new *Follower*.

You can spend your gold the following ways. If you spend the equivalent of a *Treasure*, you level up!

Celebrate. Get drunk and get known! For each *Valuable* spent in such way, you gain a hangover and a new friend. This friend will do favours for you but stay in this town. If you end up spending the equivalent of a *Treasure*, however, one of your friends becomes a *Follower* and goes with you in your adventures.

Craft. You need a core material (like the skin of a monster you've slain) to craft. The object you craft can be anything made mainly with the provided materials.

Spend as much loot as you want on tools. If you used basic *Useful* tools, the result will be useful; if you invest additional *Valuables* in it, the object will be special; and if you spend the equivalent of a *Treasure* to make it, it will be magical. Discuss what you want with the referee.

Tame. You need to have captured a feral beast. You must spend 1 *Valuable* for each of its Hit Dice (HD) to make it one of your *Followers*. Each extra *Valuable* spent training the beast teaches it a one-word order. Otherwise, it only acts to eat or in self-defence.

CONDITIONS

Blinded. All DEX rolls are hard.

(Not) Breathing. You can hold your breath for as many rounds as your STR. If you take damage, make a STR save. On failure, you start *Dying*.

Charmed. You fail all rolls against your charmer. If you attack, hurt, or insult them, you take 1D4 psychic damage.

Confused / Dazed / Exhausted. You can act OR move on your turn.

Frightened. You cannot interact with the source of your fear until you have spent a turn without seeing it. Roll a D6: **1)** Drop whatever you're holding; **2)** Scream; **3)** Fall *Prone*; **4)** *Grapple* the closest ally or object; **5)** Be *Stunned* for one turn; **6)** Run away.

Grappled. You cannot move. Roll a D6, the following body part is stuck: **1)** your head/mouth/throat, you can't *Breathe*; **2)** left leg; **3)** right leg; **4)** left arm; **5)** right arm; **6)** an item you wear or hold.

Invisible. *Attacking* and *Dodging* is easy. You are not seen.

Poisoned. You are disadvantaged in all your actions. Specific poisons can have unique additional effects too.

Prone. Melee attacks are hard. Standing up takes all your movement.

Stunned. Skip your turn. All rolls are hard.
